EDUCATION

Nanyang Technological University

Singapore

B.Sc. Computer Science & B.Soc.Sci. Economics, Double Degree

Aug. 2021 – Jun. 2026

- **Double Honours (Highest Distinction)**: Computer Science GPA 4.55/5.00 | Economics GPA 4.52/5.00
- NTU College Scholarship | MLDA Deep Learning Week 2022 Hackathon Winner (Best Software Application)

EXPERIENCE

Voltade

Singapore

Software Engineer, Founding Team

May 2025 – Present

- Engineered AI WhatsApp lead-qualification platform: shipped three-panel **CRM inbox**, LLM qualification and lead-scoring pipeline, AI training console with prompt diff views, automated follow-ups and embeddable **Preact** lead-capture widget (**React**, **Hono**, **Drizzle ORM**, **Neon Postgres**, **Mastra**).
- Re-architected WhatsApp CRM channel onto dual-identity transport (**Meta Cloud API** for 1:1 conversations, **Baileys** for groups) after root-causing 7-day restriction.
- Built text-to-SQL AI analytics agent over **111-table SQL Server ERP**: bounded five-tool loop (**AI SDK v6**, **Claude**, **mssql**) behind read-only database login and single-SELECT guard, with deterministic analyze layer and grounding pass flagging untraceable figures.
- Initiated company-wide cloud cost audit across **129 Neon projects** and **42 Railway services**, cutting run-rate **~\$2,300/mo (\$28,000/yr)**. Identified idle services by last real business write and paused them under a reversible protocol: never delete, per-app confirmation, and a restorable audit trail.
- Closed unauthenticated read path into other customers' PII on production booking gateway (public **/mcp**, spoofable identity headers) by shipping **HMAC-SHA256 request signing** with timing-safe comparison and **Ruby-to-TypeScript** golden-vector parity via staged rollout.

Voltade

Singapore

Software Engineer Intern

Jan. 2024 – May 2025

- Engineered full-stack supplier intelligence platform for a major F&B group, processing **2,000+ invoices monthly** with **≥98% line-item extraction accuracy** via AI-driven pipeline (**OpenAI**, **Supabase**, **PostgreSQL**, **Zod**).
- Built and deployed invoice ingestion service supporting single, bulk, and ZIP uploads (**React**, **Graphile Worker**, **ImageMagick**), with automated retries and deduplication to guarantee 99% coverage and reliability.
- Developed and deployed customized **AI chatbots** (**OpenAI**, **React**, **Deno**, **TypeScript**) integrated with mini applications for **12 companies**, handling over **10,000 customer inquiries monthly**, with knowledge bases enriched through vector **RAG** over scraped client data.
- Launched an internal chatbot development tool (**React**, **Deno**, **Prisma**) that became a key asset used by every engineer on the team (10+), reducing chatbot setup time from **1 week to 1 day**.

Trilogy Technologies

Singapore

Software Engineer Intern

May 2023 – Aug. 2023

- Spearheaded end-to-end development of internal workflow management system (**MongoDB**, **Express**, **ReactJS**, **Node.js**), digitizing manual, paper-based processes for **30+ operators**, thus reducing task completion time by **~30%**.

PROJECTS

UML Assessment Platform (Final Year Project) | *React, PlantUML, PostgreSQL, Vercel AI SDK* | [GitHub](#)

- Developed an automated assessment platform for educational institutions supporting MCQ, written, and **UML diagram** assignments with **LLM-assisted grading**.
- Implemented **LLM auto-grading pipeline** with accept/reject review workflow, batch processing queue, and focus monitoring to significantly reduce manual grading effort.

LineageFlow | *React, Django REST Framework, PostgreSQL, Google Cloud Storage* | [GitHub](#)

- Engineered **Git-like data versioning platform** for ML datasets over object storage (branch, commit, merge, roll back) around **immutable commit graph** with staging-area abstraction; shipped full-stack MVP in 1 week with 2-person team.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL

Frameworks & Runtimes: React, Node.js, Deno, Bun, Hono, Express, TanStack Query/Router

Databases & Storage: PostgreSQL, Neon, Supabase, Drizzle ORM, Prisma, MongoDB, AWS S3, Azure Blob Storage

AI: OpenAI, Anthropic Claude, Vercel AI SDK, Mastra, RAG

Auth & Security: OAuth 2.0, JWT, HMAC-SHA256, RBAC

Infrastructure & DevOps: Docker, Kubernetes, ArgoCD, GitHub Actions, AWS, Railway, Sentry
